

**CITY OF ST. AUGUSTINE  
CAPITAL IMPROVEMENT PLAN  
FY 2020-2024**

## Capital Improvement Plan

The City of St. Augustine's capital budget is an integral part of its operating budget process. It is approved with and is contained within the operating budget. It is comprised of two basic parts: 1) Capital Improvements Plan expenditures and 2) all other capital expenditures (or outlays).

A Capital Improvements Plan (CIP) is a plan for current and future capital expenditures that identifies each capital project, its anticipated start and completion dates, the amount to be spent each year for the project, and the source of funding.

The City has defined a capital project as any project costing in excess of \$25,000. Usually these projects become a part of the City's fixed asset inventory upon their completion. Capital equipment may also be included in the CIP. Capital equipment is defined as any single piece of equipment costing in excess of \$25,000 with a life span of more than one year. While vehicles are not usually included in the CIP by the City, vehicles with larger purchase prices are included since these purchases must also be more carefully planned. In addition, the City may include consultant studies in the CIP if the cost is also anticipated to be significant (at least over \$25,000).

The City Manager has directed that a City employee ranking team evaluate CIP requests from all City departments and other parties for the five-year period FY 2020-2024 which is considered a best financial management practice. The employee ranking team members represent a cross-section of City departments. The ranking team analyzed and ranked prospective project requests for this period. The requests were then evaluated for funding capability. Finally a presentation of the CIP is made to the City Commissioners for their review and ultimate approval.

In addition to the CIP, the capital budget includes all other capital expenditures such as vehicles, furniture and computer or other equipment. A **capital expenditure or outlay** is defined by the City as the purchase of equipment, land, buildings, fixtures or other permanent improvements with a cost in excess of \$1,000 and a useful life span of more than one year.

It is important for the City to maintain an adequate balance between day-to-day operating expenditures and capital expenditures. Both of these expenditure types play an important role in the long-term financial health of the City and the quality of life for its citizens. Both must be adequately planned for, evaluated and controlled to prevent future financial and service crises.

A summary of all CIP projects recommended within the FY 2020 City budget follows in this section. In addition, CIP projects requested for FY 2021-2024 are also summarized. It is important to point out that CIP projects identified for FY 2021-2024 will be re-evaluated each fiscal year before they are finally approved in that year's budget.

**FY 2020 - 2024**  
**CAPITAL IMPROVEMENT PROJECT REQUEST FORM**

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	General Government		<p>This project is the final phase (phase III) of the City Waterworks Building redevelopment. This will include replacement of electrical, plumbing and mechanical systems as well as construction of a new building addition to provide required ADA compliant bathrooms. The scope of work also includes a required fire sprinkler system, the restoration of the historic music platform as well as interior finishes and to fumigate the building (\$6,000). The Waterworks Building has been stabilized through grant supported redevelopment projects in the recent past including a 2014 special categories grant (\$50,000) and a 2015 small matching grant (\$350,000) and this final phase will construct a shell building that is ready for tenant build out for a specific public use or lease to a private entity as a revenue generating property. ADDED \$350K FOR RESTROOM BUILD. BUDGET LOCATED IN FAC. MGMT. 56620 BUDGET. NO GRANT MATCH AVAILABLE FOR THIS PORTION OF THE PROJECT. WILL BE ENCUMBERED IN FY 2020. MLB</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	General Government		This is a State of Florida Small Matching Grant project called "St. Augustine Survey Update Part 4". This is a request for a \$50,000 grant from the State of Florida, Department of State. This grant will fund a private consultant to conduct a survey of 942 individual historic buildings in the West Augustine area of the city. This survey will include updating 599 historic buildings that were surveyed in 1980 and 343 historic buildings that have not been surveyed. This grant application does not require city matching funds, it is entirely funded by the State of Florida.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	General Government		Upgrade exciting internet and network speeds throughout the City. City is already reaching the maximum bandwidth allowed for our current Comcast provider. We will need to see about replacing our currntly Comcast Business line with a full fiber optic provider to increase speeds and stability throughout the City. This will include changing our provider and perhaps install new fiber optic cabling to our offsite locations (PD, Fire, Fleet Garage, VIC and Waste Water). This will increase network speeds, prevent network outages, provide a more robust network for all departments, and that receive revenue taken in with faster transaction times. Prices can vary depending on of the City owns the physicals or if we are just renting them from a provider. If we own the lines we will need to contract a company to test the speeds, repair and perhaps run new lines.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Public Safety		Purchase of new Fire Custom Pumper Truck to replace outdated truck. City will take possession of the truck in April, 2014 and begin payments on the truck in November, 2014. The Lease-Purchase Agreement, with Leasing 2, Inc. is for five annual payments at an interest rate of 2.69%. The agreement required a \$75,000 downpayment and a loan of \$215,000. This truck is Engine 43 and is currently the first out engine at the Island Station.  THIS PROJECT HAS BEEN COMPLETED.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Public Safety		The purchase of a new custom fire pumper to replace Engine 44, a 2004 E-One Pumper. In 2019 this truck will be 15 years old. Currently this truck is a back up engine at the Island station. We have been in constant contact with several manufacturers and all have reported larger than expected cost increases as a result of tariffs on aluminum and steel which has impacted the cost of a new engine. New cost is noted.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Public Safety		Purchase of new Custom 100' Aerial Truck to replace the existing 2011 Ferrara Quint that is becoming more and more deficient. This truck has seen excessive wear and down time , unacceptable wait times on parts, and lack of service from the manufacturer. Fleet services does not expect the vehicle to reach its life expectancy under current operating conditions. Additionally, new construction has demonstrated the need for our department to enhance capabilities and return to a 100' aerial.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Public Safety		Replace the remaining 5 roll-up bay doors (#3,4,5,6,&8) at the main fire station. Three of the doors have been replaced (Door #1,2&7) and one door has had only the barrel changed out (Door #5). These doors are all at the end of their life expectancy and we have had four doors fail in the past year. This has caused a major disruption to timely response s on emergency calls. Replacing the remaining doors now will give us a significant cost savings by bulk ordering and will cut down on repair costs. The new doors are also built to a higher wind rating and are in compliance with current Florida Building Code. We have 3 bay doors that need to be replaced which should complete this project. Anticipate a \$2,000 increase in cost due to tariffs on aluminum and steel.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Public Safety		<p>As a result of changes to NFPA 1981 (2018 Edition) our current SCBA airpaks are more than two updates out of compliance. In the past we have been able to make upgrades by only changing the packs themselves. This recent NFPA change has resulted in all of our existing equipment becoming non-compatible with any future upgrade. We will need to replace bottles, masks and air packs to become compliant. St Johns County Fire Rescue is in the process of overhauling their breathing systems as well. Once they complete their replacement process, they will no longer be compatible with ours.</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Public Safety		The Island Fire Station was built in 1957 by on-duty firefighters and does not meet any current building codes, nor hurricane standards. This station is too small for modern fire apparatus. A new station can be designed with better egress and serve a pivotal role in the City's Disaster Recovery Plan. We will be attending the station design conference in North Carolina later this year and will have updated information regarding project costs after that.

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION	
Project Category:	Transportation		To provide Neighborhood Connectivity and further implement bicycle study recommendations, need to construct a protected pedestrian/bicycle crossing across May Street at intersection with Magnolia Ave. This will require a FDOT permit. FDOT has requested that we wait until after the new intersection at San Marco and May Street is complete before initiating the Crossing project. In addition to the crossing, permanent construction is needed to replace the existing temporary delineators which prohibit traffic from entering Douglas Avenue and North Magnolia Avenue from May Street. 2019 - Design North City multi-use path from Fullerwood to Bayfront. 2022 - design, permit and install bke/ped crossing at May and Magnolia. PM R. Franklin

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Transportation		<p>Many existing static signs are directing drivers toward the VIC Parking Garage. Need to adapt signs to display dynamic messages, such as "Garage Full" or "Garage at 90% full". Dynamic Signs could also direct drivers to Satellite Parking Facilities. Currently, drivers are directed to parking garage and on congested weekends/holidays garage frequently fills and subsequently closes for approximately one hour before reopening. This creates road rage because drivers are not made aware of garage closure until after fighting through traffic only to see baracades blocking the garage entrance. Phone Apps and/or additional dynamic signs on the outskirts of town could direct traffic immediately to satellite parking which would help reduce congestion downtown. During 2018, design an overall dynamic messaging system which would also incorporate notification of Bridge of Lions openings. During 2020, Phase 1 of implementation, and continuing implementation in 2021. PM R. Franklin and X. Pellicer</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Transportation		<p>Demand Exists for add'l Parking Garage and/or Satellite Parking Facilities. Locations are to be determined. Existing V.I.C. Parking Garage fills-up and closes leaving no other alternatives. Calendar days of Garage Closures during year 2014 = 23 days, 2015 = 30 days, year 2016 = 40 days and 2017 = 46 days. All indications are that closures will continue to increase. Local residents and Businesses are begging for additional parking. Recent Shuttling efforts have proven to be successful on the North end of town. Now is the time to identify/purchase property for long term development of future parking locations. Property costs continue to increase and potential sites are fast diminishing. During 2019, estimate \$900K to purchase land, During 2020, estimate \$300K to design satellite parking lots which could possibly be used later to construct add'l parking garage. Total Estimated Costs are \$2.05K.</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION																												
Project Category:	Stormwater Collection		<p>This project is a flood mitigation and resiliency project focused on protecting the historic core of the City of St. Augustine. Lake Maria Sanchez currently accepts stormwater from the core City area, but high tidal waters at the lake's southern outfall can result in tidal backflow into the system and prevent stormwater from leaving the lake. Additionally, low points at South Street, the Bridge of Lions, St Andrews Court, and Sevilla Street allow tidal waters to flow into the core City area when coastal tidal conditions are greater than 5 feet. Because of the City's coastal location, this project will also consider sea level rise to build resiliency into City planning efforts. The proposed project will close these low spots throughout the City by raising elevations at these streets to above approximately 7.0ft, creating a continuous higher elevation ridge around the entire core City. South Street will be raised to an elevation of approximately 7.0ft and a backflow prevention device will be added to the outlet of the lake to prevent tidal waters from backflowing freely into Lake Maria Sanchez during elevated tidal events. Lastly, a stormwater pump station will be provided to preserve stormwater discharge capacity from the lake during the elevated tidal events. Utility work expected on Granada and Cordova. Project is expected to be 17.5M. TG</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Water Distribution		<p>The utility is seeking to implement a Meter change out program to improve meter reading efficiency, accuracy and customer service the objective of the project is to change out approximately 2,803 meters. The meter replacement project will replace existing water meters starting with the first billing cycle making it easier to track the efficiency and revenue gained from this project .The water meters will be replaced with a meter that has the ability to be read by a mobile collector or drive by system significantly reducing the time required to collect the meter readings and improving the meter reading accuracy. The new system will reduce time lost and worker compensation claims due to injuries. The meters will have the ability to log meter readings giving customer service the ability to produce water consumption logs for customers reducing water loss by providing leak information to customer's faster. Coupling the AMR data with a rate structure that encourages conservation the City will extend the life of the well field capacity, treatment plant capacity, and associated energy savings. C/B Ratio = 1.15, Pilot was \$350,000 with \$89,000 grant; Phase I is 2,810 Meters \$1,192,422/Phase II is 2,410 Meters \$1,050,000, Phase 3-5 is 7,250 meters \$3,150,000 Source: SRF</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	WTP		Review of recent specific capacity data for Wells D-2, D-3, and D-4 indicate that the wells are experiencing a declining yield due to encrustation and corrosion of the screened well. In order to improve the yield of each well is recommended to acidize the screen section of the well using concentrated hydrochloric acid with a metal inhibitor. DETERMINED MOST OF THE ISSUES WITH THE WELL PRODUCTION WAS FROM THE SHAFTS GETTING WORN OUT. HAVE IMPLEMENTED A REPLACEMENT PROJECT FOR ALL THREE WELLS. ONE WELL REMAINING. TG

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION
Project Category:	Sewer Collection		<p>During Hurricane Matthew, 13 of the City's Pumping Stations (PSs) were impacted by storm surge. The affected PSs are PSNo. 4, 5, 6, 7, 10, 11, 12, 21, 22, 23, 24, 50, and 52. Three PSs will be replaced and the other 10 will be repaired. Also the Electrical Control Panels and the RTUs for all 13 PSs will be replaced. The estimated cost to replace the control panels and the RTUs is \$624,000. All 13 PSs will be upgraded for Flood Resilience by elevating the control panels and raising the wet well slab above flood elevation. The estimated Flood Resilience Costs is \$581,000. Visual barriers will shield the PSs from view and increase site security. The estimated cost for the Visual Barriers is \$220,000. The Total Opinion of Probable Cost (OPCC) for all 13 PSs is \$11,167,000. A detailed Cost breakdown by PS can be found in the Final Technical Memorandum (TM) titled City of St. Augustine Lift Station Evaluation. This TM was prepared by Hazen &amp; Sawyer. REMINDER - need to make sure that \$1M+ gets added to years 2024 and beyond. PM S. Slaughter</p>

PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION	
Project Category:	Sewer Collections		Annual ongoing program to eliminate Inflow & Infiltration. Most cost effective money spent to defer capital expenditure of treatment plant expansion. Annual required/committed to FDEP \$250,000 - \$500,000 minimum for sewer main lining alone. To reap full benefits of main lining, sewer laterals and manholes must be rehabbed. I&I originates from sources other than main lines. Must correct all sources to impact an entire sewer basin's amount of flow. Sewer Main Lining includes inspecting, cleaning, testing, sliplining, grouting and other methods of eliminating rain and ground water. Sewer Lateral Rehab/Replacement includes inspecting, testing, cleaning, lining, grouting and/or open cut trench to eliminate rain and ground water. Sewer Manhole Rehab includes inspecting, cleaning, lining and grouting to eliminate rain and ground water. Currently planned and ongoing basins FY 2016: Basin 5 and Basin 15, FY 2017: Basin 51, FY 2018, Basin 20, 7, 23, 9, 52; FY 2019: 11 Basins, FY 2020 19 Basins, FY2021 20 and 24; FY 2022 : Basin 7 * Program provides significant decrease in operating expenses by saving plant capacity. PROJECT SUMMARY			DESCRIPTION AND JUSTIFICATION		
Project Category:	Municipal Marina		Provide/Install 100 18' replacement mooring balls and installation. Mooring balls are -over 10 years old and show major wear and damage.  - Rebuild 20 mooring down line systems with new stormsoft material. - Rebuild 2 large mooring anchor systems for vessels to 120'. #5 & #6 Replace existing storm soft line systems. Moorings have been in use nearly five years. The life of the equipment is uncertain based on varying local conditions and usage. I would expect to begin replacing systems within the next few years.
